                                                                                           ર્
                                                                                                                                                                                                                                         The invention relates to a novel method for the construction of a library of frecombinant antibodies. The novel method comprises clustering variable regions of a collection of antibodies having known 3D structures into at the conformations of structural ensembles, each comprising at least two different antibody sequences but with substantially identical main chain conformations. The method is useful for constructing a library of cartificial antibodies in silico which provides a structurally diverse and then be screened for binding a wide variety of target molecules, cincluding small molecules, and biomacromolecules such as proteins, peptides and nucleic acids. The libraries constructed are useful as a source of antibody candidates for further screening for novel antibodies with high affinity against a wide range of antigens and having no or continuum immunogenecity to human subjects treated with antibody therapeutics. This sequence represents a protein region of an antibody candidate to the novel antibody library construction method of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            least two families of structural ensembles, each comprising at least two different antibody sequences but with substantially identical main chain conformations. The method is useful for constructing a library of artificial antibodies in silico which provides a structurally diverse and yet functionally more relevant source of antibody candidates which can then be screened for binding a wide variety of target molecules, including small molecules, and biomacromolecules such as proteins, peptides and nucleic acids. The libraries constructed are useful as a source of antibody candidates for further screening for novel antibodies with high affinity against a wide range of antigens and having no or minimum immunogenecity to human subjects treated with antibody therapeutics. This sequence represents a protein region of an antibody relating to the novel antibody library construction method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel method for the construction of a library of recombinant antibodies. The novel method comprises clustering variable regions of a collection of antibodies having known 3D structures into at

The antibody comprises a variable heavy chain (VHC)DR3 region and a variable light chain (VLC)DR3 region. An antibody preparation of the invention has hepatotropic, cytostatic, nephrotropic and cardiant activity. The human antibody is useful for decreasing an MMP-inhibiting activity of a TIMP-1. It is especially useful for ameliorating the symptoms of a disorder in which TIMP-1 is elevated, e.g. liver fibrosis, alcoholic liver disease, cardiac fibrosis, acute coronary syndrome, lupus nephritis, glomerulosclerotic renal disease, idiopathic pulmonary fibrosis, benign prostate hypertrophy, lung cancer or colon cancer. The antibody is also useful for detecting a TIMP-1 in a test preparation, or in diagnosing a disorder in which a TIMP-1 level is elevated. The sequences shown in ABR01502-ABR01545 represent the heavy chain regions of a human anti-TIMP-1 antibody of the invention.
AAB67617-23 represent single chain antibody (scFv) fragments which are specific for human leukocyte antigen (HLA)-CW6. The fragments are derived from a synthetic human combinatorial antibody library based on molecular consensus frameworks and CDRs randomised with trinucleotides. The specification describes a human immunoglobulin fragments specific

The HLA-Cw6 serotype is considered highly relevant in studies of natural killer cell silencing as well as miscarriages. HLA-Cw6 demonstrates a disequilibrium in some recurrent abortions. Psoriasis may also be linked to HLA-Cw6. The anti-HLA-Cw6 immunoglobulin fragments are useful for the preparation of a pharmaceutical for the treatment of humans. They are also useful for HLA phenotyping.
                                                                                                                                                                                Sequence
                                                                                                                                                                                                                          The present sequence is the human antibody heavy variable region synthetic sequence VHIA, used in a human derived antibody gene library.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Immunomodulatory human NHC class II antigen-binding protein; HLA; human leukocyte antigen; immune system; immunesuppression; antibody; major histocompatibility complex; antirheumatic; antiarthritic; neuroprotective; antiinflammatory; antithybetic; antipsoriatic; immunosuppressive; dermatological; antithyroid; nephrotropic; psoriasis; thyromimetic; hepatotropic; immune response suppressor; narcolepsy; rheumatoid arthritis; juvenile arthritis; multiple sclerosis; insulitis; Grave's disease; insulin-dependent diabetes; Hashimoto's disease; systemic lupus erythematosus; ankylosing spondylitis; myasthenia gravis; transplant rejection; graft versus host disease; pemphigus vulgaris; glomerulonephritis; thyroiditis; pancreatitis; primary biliary cirrhosis; irritable bowel disease; Stocrem's avortrome
                The present invention describes a composition (I), comprising a polypeptide comprising an antibody-based antigen-binding domain of human composition with binding specificity for an antigen expressed on the surface of a cell, where treating cells expressing the antigen with the polypeptides leads to suppression of an immune response, and the IC50 for the suppression of immune response and the IC50 for antirheumatic, antispristic, neuroprotective, antiinflammatory, antidiabetic, antisportatic, immunosuppressive, dermacological, antithyroid, nephrotropic, thyromimetic and hepatotropic activities, and can be used as suppressor of immune response. (I) is useful for suppressing activation or proliferation of a cell of the immune system with another cell, immunosuppressing a patient and for immune system with another cell, immunosuppressing a patient and for the immune system with another cell, immunosuppressing a patient and for the immune system with another cell, immunosuppressing a patient and for the immune system with another cell, immunosuppressing the interaction of a cell of the immunosuppressing a patient and for the immune system with another cell, immunosuppressing the interaction of a cell of the immunosuppressing the immune system with another cell, immunosuppressing the system with another cell, immunosuppressing the system with another cell, immunosuppressing the system with another cell with a system with another cell with a system with a syst
                                                                                                                                                                                                                                                                                                                                                                                                                                   Composition for suppressing immune response, treating diseases immune system, has polypeptide comprising antibody-based antigen-binding domain of human composition, which binds antige expressed on a cell surface
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (GPCB-)

The invention relates to a novel purified preparation of a human antibody, which binds to a tissue inhibitor of metalloprotease-l and neutralises a matrix metalloprotease (MMP)-inhibiting activity

activity

0£

(TIMP-1)

New human anti-TIMP-1 (tissue inhibitor of metalloprotease-1) antibodies, for diagnosing or ameliorating the symptoms of a disorder in which TIMP-1 is elevated, e.g. liver fibrosis, benign prostate

The invention relates to a novel purified preparation of a human antibody, which binds to a tissue inhibitor of metalloprotesse-1 (TIMP-1) and neutralises a matrix metalloprotesse (MMP)-inhibiting activity of TMP-1. The antibody comprises a variable heavy chain (VMC)DR3 region and a variable light chain (VLC)DR3 region. An antibody preparation of the invention has hepatotropic, cytostatic, nephrotropic and cardiant activity. The human antibody is useful for decreasing an MMP-inhibiting activity of a TIMP-1. It is especially useful for ameliorating the symptoms of a disorder in which TIMP-1 is elevated, e.g. liver fibrosis, alcoholic liver disease, cardiac fibrosis, acute coronary syndrome, lupus nephritis, glomerulosclerotic renal disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; antibody; tissue inhibitor of metalloprotease-1; TIMP-1; VLCDR3; matrix metalloprotease; MMP; variable heavy chain; VHCDR3; hepatotropic; variable light chain; cytostatic; nehotropic; cardiant; liver fibrosis; alcoholic liver disease; cardiac fibrosis; acute coronary syndrome; lupus nephritis; glomerulosclerotic renal disease; lung cancer; idiopathic pulmonary fibrosis; benign prostate hypertrophy; colon cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cancer. The antibody is also useful for detecting a TIMP-1 in a t preparation, or in diagnosing a disorder in which a TIMP-1 level elevated. The sequences shown in ABRO1502-ABRO1545 represent the chain regions of a human anti-TIMP-1 antibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                     New human anti-TIMP-1 (tissue inhibitor of metalloprotease-1) antibodies, for diagnosing or amellorating the symptoms of a disorder in which TIMP-1 is elevated, e.g. liver fibrosis, benign prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 N-PSDB;

                         are specific for human leukocyte antigen (HLA)-Cw6. The fragments are derived from a synthetic human combinatorial antibody library based on molecular consensus frameworks and CDRs randomised with trinucleotides. The specification describes a human immunoglobulin fragments specific for HLA-Cw6. The HLA-Cw6 serotype is considered highly relevant in studies of natural killer cell silencing as well as miscarriages. HLA-Cw6 demonstrates a disequilibrium in some recurrent abortions. Psoriasis may also be linked to HLA-Cw6. The anti-HLA-Cw6 immunoglobulin fragments are useful for the preparation of a pharmaceutical for the treatment of humans. They are also useful for HLA phenotyping.
                                                                                                                                                                                                                                 fragment s

The antibody is also useful for detecting a TIMP-1 in a t preparation, or in diagnosing a disorder in which a TIMP-1 level elevated. The sequences shown in ABR01502-ABR01545 represent the chain regions of a human anti-TIMP-1 antibody of the invention.

The IgG1, in its nascent form, bears no sialy1-Lex side chains. inventors designed a molecule including several such sites for attachment of sialy1-Lex side chains (see AAR2442, FT). The additional N-linked glycosylation sites are introduced at locati which impair complement fixing and Fc receptor binding ability. Antibodies bearing multiple sialy1-Lex determinants are useful fisrupting undesirable interactions between cells or proteins. Disrupting this interaction has therapeutic applications, for a protein and the simple sialy1-lex determinants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               25-MAR-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
        The invention relates to a novel purified preparation of a human antibody, which binds to a tissue inhibitor of metalloprotease-1 (TIMP-1) and neutralises a matrix metalloprotease (MMP)-inhibiting activity of TMP-1. The antibody comprises a variable heavy chain (VHC)DR3 region and a variable light chain (VHC)DR3 region. An antibody preparation of the invention has hapatotropic, cytostatic, nephrotropic and cardiant activity. The human antibody is useful for decreasing an MMP-inhibiting activity of a TIMP-1. It is especially useful for ameliorating the symptoms of a disorder in which TIMP-1 is elevated, e.g. liver syndrome, lupus nephritis, glomerulosclerotic renal disease, idiopathic myndrome, lupus nephritis, glomerulosclerotic renal disease, idiopathic

                                                                                            The present sequence is the heavy chain variable region of a human cumur-specific monoclonal antibody. Neoplastic cells selectively express antigens which are not present on normal cells. Thus monoclonal can be produced that are specifically directed against tumour-specific antigens. The antibodies can be conjugated to cytotoxic or cytostatic agents and used to selectively target cancer cells for the climination of tumours. They can also be linked to diagnostic moieties that allow the imaging of neoplastic cells. Nucleic acids encoding human tumour-specific monoclonal antibodies can be used to express the cantibodies and can be recombinantly engineered to produced modified antibodies with higher affinity or higher selectivity for tumour cells. Tumour-specific antibodies were produced by hybridomas that were generated by in vitro immunisation of human spleen cell cultures with the produced from the hybridoma by RT-PCR. The present sequence was then isolated from the hybridoma by RT-PCR. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                    The present invention relates to human anti-epidermal growth factor receptor single-chain antibodies (anti-EGFR-eGFVs) Solated from a human IgM phage display library using EGFR as antigen. Two isolates with different amino acid sequences were identified. The anti-EGFR-eGFVs are useful for treating cancer, and for the diagnostic location and assessment of tumour growth, where the anti-EGFR-eGFV is radiolabelled. The present sequence represents human anti-EGFR single-chain antibody isolated from clone pSEX81-63.

(I) is useful a primer or probe for detecting the presence of inhibitory antibodies directed against factor VIII. The polypeptides of the invention and the antibodies generated from them are useful in compositions for neutralizing factor VIII inhibiting antibodies in hemophilia A patients. This sequence represents a fragment of the human factor VIII antibody heavy chain variable region protein DP-10 which is used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      treatment
                                                                                                                                                                                                                                 WPI;
hybridizable polynucleotides) comprising a contiguous nucleotide sequence coding for a human antibody with factor VIII specificity which has hemostatic activity. (I) is useful a primer or probe for detecting the presence of inhibitory antibodies directed against factor VIII. The polypeptides of the invention and the antibodies generated from them are useful in compositions for neutralizing factor VIII inhibiting antibodies in hemophilia A patients. This sequence represents a human
                                                                                                                                    Example 9; Fig 11A; 61pp; English.
                                                                                                                                                                                   New polynucleotide, polypeptide and presence of neutralizing antibodies
                                                                                                                                                                                                                                                              Voorberg

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     문
CC acceptor tyrosine kinase family), or modulating formation of cells into capillary-like structures by contacting the cells with a composition comprising (1). The method is useful modulating formation of cells into comprising (1). The method is useful modulating angiogenesis at a site (C (preferably, within a human) or modulating the formation of cells (c (indothelial cells of human origin) into capillary-like structure. The CC (in is useful for preventing, treating or ameliorating a medical c condition e.g., cancer, metastasis, diabetic retinopathy, macular CC degeneration, cardiovascular disease, wound, pregnancy, or a clinical condition involving angiogenesis in the reproductive system, including CC condition involving angiogenesis in the reproductive system, including c regulation of placental vascularization in an individual. The variant CC protein is supplied to the individual as a source of polymucleotide conding the protein and expressing the protein in vivo. (I) is used CC useful for modulating angiogenesis at a site. Polymucleotides are useful for modulating angiogenesis at a site. Polymucleotides encoding the useful in gene therapy technique for treating above mentioned CC medical conditions. The present sequence represents the scFv lb4 antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                     tumour-specific antigens. The antibodies can be conjugated to cytotoxic or cytostatic agents and used to selectively target cancer cells for the elimination of tumours. They can also be linked to diagnostic moieties that allow the imaging of neoplastic cells. Nucleic acids encoding human tumour-specific monoclonal antibodies can be used to express the antibodies and can be recombinantly engineered to produced modified antibodies with higher affinity or higher selectivity for tumour cells. Tumour-specific antibodies were produced by hybridomas that were generated by in vitro immunisation of human spleen cell cultures with breast carcinoma cells. The nucleic acid encoding the monoclonal antibody was then isolated from the hybridoma by RT-PCR. The present sequence

                                                                                                                                                                                                                                                                                                                                                        The present invention relates to human anti-epidermal growth factor receptor single-chain antibodies (anti-EGFR-eCFVs) isolated from a human IgM phage display library using EGFR as antigen. Two isolates with different amino acid sequences were identified. The anti-EGFR-scFvs are useful for treating cancer, and for the diagnostic location and assessment of tumour growth, where the anti-EGFR-scFv is radiolabelled. The present sequence represents human anti-EGFR single-chain antibody isolated from clone pSEX81-63.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel human anti-epidermal growth factor receptor single-chain antibody useful for diagnostic location and assessment of tumour growth, and in

                            The invention relates to a novel purified preparation of a human antibody, which binds to a tissue inhibitor of metalloprotease-1 (TIMP-1) and neutralises a matrix metalloprotease (MMP)-inhibiting activity of TMP-1. The antibody comprises a variable heavy chain (VHC)DR3 region and a variable light chain (VLC)DR3 region. An antibody preparation of the invention has hepatotropic, cytostatic, nephrotropic and cardiant activity. The human antibody is useful for decreasing an MMP-inhibiting activity of a TIMP-1. It is especially useful for ameliorating the symptoms of a disorder in which TIMP-1 is elevated, e.g. liver fibrosis, alcoholic liver disease, cardiac fibrosis, acute coronary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; antibody; tissue inhibitor of metalloprotease-1; TIMP-1; VLCDR3; matrix metalloprotease; MMP; variable heavy chain; VHCDR3; hepatotropic; variable light chain; cytostatic; nephrotropic; cardiant; liver fibrosis; alcoholic liver disease; cardiac fibrosis; acute coronary syndrome; lupus nephritis; glomerulosclerotic renal disease; lung cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cancer. The antibody is also useful for detecting a TIMP-1 in a t preparation, or in diagnosing a disorder in which a TIMP-1 level preparation. The sequences shown in ABRO1502-ABRO1545 represent the chain regions of a human anti-TIMP-1 antibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           New human anti-TIMP-1 (tissue inhibitor of metalloprotease-1) antibodies, for diagnosing or ameliorating the symptoms of a disorder in which TIMP-1 is elevated, e.g. liver fibrosis, benign prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          31-OCT-2002

                                               AAB67617-23 represent single chain antibody (scFv) fragments which are specific for human leukocyte antigen (HLA)-Cw6. The fragments are derived from a synthetic human combinatorial antibody library based on molecular consensus frameworks and CDRs randomised with trinuclectides. The specification describes a human immunoglobulin fragments specific for HLA-Cw6. The HLA-Cw6 serotype is considered highly relevant in studies of natural killer cell silencing as well as miscarriages. HLA-Cw6 demonstrates a disequilibrium in some recurrent abortions. Psoriasis may also be linked to HLA-Cw6. The anti-HLA-Cw6 immunoglobuli fragments are useful for the preparation of a pharmaceutical for the treatment of humans. They are also useful for HLA phenotyping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 pulmonary fibrosis, benign prostate hypertrophy, lung cancer or cancer. The antibody is also useful for detecting a TIMP-1 in a t preparation, or in diagnosing a disorder in which a TIMP-1 level elevated. The sequences shown in ABR01502-ABR01545 represent the chain regions of a human anti-TIMP-1 antibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                Novel isolated human immunoglobulin or functional immunoglobulin fragment specific for human leukocyte antigen Cw6, useful for troof humans and for human leukocyte antigen phenotyping -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence

The antibody comprises a variable heavy chain (VHC)DR3 region and a variable light chain (VLC)DR3 region. An antibody preparation of the invention has hepatotropic, cytostatic, nephrotropic and cardiant activity. The human antibody is useful for decreasing an MMP-inhibiting symptoms of a disorder in which TIMP-1 is elevated, e.g. liver fibrosis, alcoholic liver disease, cardiac fibrosis, acute coronary syndrome, lupus nephritis, glomerulosclerotic renal disease, idiopathic pulmonary fibrosis, benign prostate hypertrophy, lung cancer or colon cancer. The antibody is also useful for detecting a TIMP-1 in a test preparation, or in diagnosing a disorder in which a TIMP-1 level is elevated. The sequences shown in ABRO1502-ABRO1545 represent the heavy chain regions of a human anti-TIMP-1 antibody of the invention.
AAB67617-23 represent single chain antibody (scPv) fragments which are specific for human leukocyte antigen (HLA)-Cw6. The fragments are derived from a synthetic human combinatorial antibody library based on molecular consensus frameworks and CDRs randomised with trinucleotides. The specification describes a human immunoclobulin frameworks.
                                                                                                                                                                                                                                                                        Novel isolated human immunoglobulin or functional immunoglobulin fragment specific for human leukocyte antigen Cw6, useful for troof humans and for human leukocyte antigen phenotyping -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  01-MAR-2001

The HLA-Cw6 serotype is considered highly relevant in studies of natural killer cell silencing as well as miscarriages. HLA-Cw6 demonstrates a disequilibrium in some recurrent abortions. Psoriasis may also be linked to HLA-Cw6. The anti-HLA-Cw6 immunoglobulin fragments are useful for the preparation of a pharmaceutical for the treatment of humans. They are also useful for HLA phenotyping.

                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DB DB
